

Edhan Edge

Problem Statement, Solution & MVP Module Overview

1. Introduction

Small and Medium Enterprises (SMEs) and early-stage startups form the backbone of most economies. Despite generating significant economic value, these businesses face persistent challenges in managing finances, accessing reliable business services, hiring short-term expertise, and automating daily operations.

Most SMEs rely on fragmented tools such as spreadsheets, notebooks, or basic accounting software. While data is collected, it is rarely transformed into meaningful insights that support decision-making. Additionally, finding trustworthy service providers, clients, or skilled professionals for short-term assignments remains inefficient and time-consuming.

Edhan Edge is being built to address these challenges by combining **financial intelligence, business collaboration, short-term talent access, and automation** into a single, scalable platform.

2. Industry Problem Overview

2.1 Financial Visibility Gap

SMEs often maintain financial data in CSV files, Excel sheets, or bank statements but lack the tools or expertise to analyze this data. As a result:

- Cash flow problems go unnoticed until it is too late
- Expenses are not optimized
- Profitability trends are unclear
- Financial decisions are reactive rather than proactive

Hiring full-time accountants or financial analysts is expensive and not feasible for many growing businesses.

2.2 Difficulty in Finding Reliable Business Partners

SMEs struggle to:

- Identify trustworthy service providers
- Validate the credibility of other businesses
- Find clients efficiently
- Engage in cross-border collaborations with confidence

Existing platforms are either too generic, lack verification, or are not designed specifically for SME-to-SME collaboration.

2.3 Short-Term Talent Access Challenges

Businesses often need specialists for:

- Technology implementation
- Data analysis
- Automation
- Strategy or compliance work

However:

- Full-time hiring is costly
- Freelancing platforms lack accountability and verification
- There is no structured way to engage professionals for short-term assignments with trust and performance tracking

2.4 Operational Inefficiency Due to Manual Processes

Many SMEs still manually handle:

- Financial reminders
- Reporting
- Follow-ups
- Notifications

This leads to:

- Missed deadlines
 - Human errors
 - Inefficient use of time
 - Reduced productivity
-

3. Edhan Edge – Proposed Solution

Edhan Edge aims to become an **AI-powered business intelligence and collaboration platform** that helps SMEs:

- Understand their financial health clearly
- Make data-driven decisions
- Discover business opportunities and services
- Hire verified professionals for short-term needs
- Automate repetitive operational tasks

The platform is modular, allowing each feature to deliver independent value while contributing to a unified ecosystem.

4. MVP Module Breakdown

Module 1: FinFlow

Problem

SMEs have financial data but lack clarity. Raw numbers do not translate into insights, warnings, or actionable advice. Financial risks such as cash shortages, overspending, or declining margins are often detected too late.

Solution

Edhan Edge provides an automated financial intelligence system that converts uploaded financial data into insights, visual reports, and recommendations.

What We Are Planning to Do

Businesses will upload financial documents such as:

- Sales and revenue reports
- Expense sheets
- Cash flow statements
- Balance sheets
- Bank statements
- Vendor and customer transaction data

These files can be in CSV or Excel format, and multiple files can be uploaded at once.

The system will:

1. Automatically clean and standardize data, even if file formats differ
 2. Identify key financial fields such as dates, amounts, inflows, and outflows
 3. Aggregate data into structured financial metrics
-

What Will Happen

Once processed, the platform will generate:

- Profit and loss summaries
- Cash inflow and outflow analysis
- Expense categorization and breakdown
- Revenue and expense trend analysis
- Burn rate and runway estimation

Data will be presented through:

- Interactive charts
- Monthly and yearly comparisons
- Simple dashboards designed for non-finance users

AI-generated insights will explain the data in clear language, highlighting:

- Financial strengths
- Areas of concern
- Growth opportunities
- Early warnings such as potential cash crunches

Automated reminders will notify users to upload data, review reports, or address identified risks.

Module 2: Client & Service Discovery Platform

Problem

SMEs find it difficult to identify reliable service providers or clients. Trust, credibility, and transparency are missing in existing platforms, making collaboration risky.

Solution

Edhan Edge introduces a structured SME-to-SME discovery platform that enables businesses to find, evaluate, and connect with verified partners.

What We Are Planning to Do

Businesses will create profiles that highlight:

- Services offered
- Industry expertise
- Past work
- Business credibility indicators

The platform will allow:

- Searching for services based on domain and expertise
 - Filtering potential partners by relevance
 - Initiating collaboration discussions directly
-

What Will Happen

Businesses will be able to:

- Discover relevant partners efficiently
- Assess credibility before engagement
- Build long-term or short-term collaborations

This module also enables cross-border business discovery, supporting international projects and partnerships.

Module 3: Short-Term Talent & Assignment Hiring

Problem

Businesses often need experts for short durations but lack a reliable way to engage them. Traditional freelancing lacks accountability and trust, while full-time hiring is inefficient.

Solution

Edhan Edge enables structured short-term assignment hiring with verification and performance tracking.

What We Are Planning to Do

Professionals will create profiles including:

- Skills and experience
- Project history
- Availability
- Reliability indicators

Companies can post assignment requirements specifying:

- Skill needs
 - Duration
 - Scope of work
-

What Will Happen

Businesses can:

- Hire professionals for defined short-term projects
- Track performance and outcomes
- Leave structured feedback after completion

This creates a trusted ecosystem for temporary expertise exchange without long-term employment commitments.

Module 4: Automation Services

Problem

Manual processes slow down operations and increase error rates. SMEs lack accessible tools to automate workflows without technical expertise.

Solution

Edhan Edge offers automation services that simplify repetitive operational and financial tasks.

What We Are Planning to Do

The platform will provide:

- Pre-built automation templates
- Trigger-based workflows
- Data-driven alerts

Use cases include:

- Monthly financial report generation
 - Payment and follow-up reminders
 - Risk alerts
 - Client notifications
-

What Will Happen

Businesses will reduce manual effort, improve consistency, and respond faster to operational and financial events. Automation will be tightly integrated with financial insights to ensure actions are timely and relevant.

5. Conclusion

Edhan Edge is designed to solve fundamental SME challenges through a modular, scalable, and AI-driven approach. The MVP focuses on delivering immediate value in four critical areas: financial clarity, business discovery, short-term talent access, and automation.

By combining these capabilities into a single platform, Edhan Edge lays the foundation for a robust SaaS product that can evolve with business needs and expand globally.
